

BOOTSTRAP 5 CHEAT SHEET

Here's a cheat sheet for Bootstrap 5:

1. **Containers**:

- `.container`: Creates a responsive fixed-width container.
- `.container-fluid`: Creates a full-width container that spans the entire viewport.

2. **Grid System**:

- `.row`: Creates a horizontal row to contain columns.
- `.col-{breakpoint}-{number}`: Creates a column with a specified width at different breakpoints. Breakpoints include `xs`, `sm`, `md`, `lg`, `xl`, and `xxl`. Numbers range from 1 to 12.

3. **Typography**:

- `.h1` to `.h6`: Heading tags from h1 to h6.
- `.lead`: Creates a larger, bold, and gray-colored paragraph for highlighting.
- `.display-{1-6}`: Creates large, display-sized text.
- `.fw-bold`: Sets font-weight to bold.
- `.text-{breakpoint}-{alignment}`: Sets text alignment at different breakpoints. Alignment options are `start`, `center`, `end`, `left`, `right`, and `justify`.

4. **Buttons**:

- `.btn`: Creates a basic button.
- `.btn-{color}`: Applies a color variant to the button. Colors include `primary`, `secondary`, `success`, `danger`, `warning`, `info`, `light`, and `dark`.
- `.btn-lg`, `.btn-sm`, `.btn-block`: Sets button size to large, small, or block.
- `.disabled`: Disables the button.
- `.active`: Applies the active state to the button.

5. **Forms**:

- `.form-control`: Creates a form input.
- `.form-check`: Creates a checkbox or radio input.
- `.form-select`: Creates a dropdown/select input.
- `.form-label`: Adds a label to a form input.
- `.form-floating`: Creates a floating label effect for inputs.

6. **Navbar**:

- `.navbar``: Creates a responsive navigation bar.
- `.navbar-brand``: Adds branding/logo to the navbar.
- `.navbar-nav``: Creates a container for navigation links.
- `.nav-link``: Creates a navigation link item.
- `.navbar-toggler``: Creates a button to toggle the navbar collapse.

7. ****Alerts****:

- `.alert``: Creates a dismissible alert box.
- `.alert-{color}``: Applies a color variant to the alert. Colors include ``primary``, ``secondary``, ``success``, ``danger``, ``warning``, ``info``, ``light``, and ``dark``.
- `.alert-dismissible``: Adds a close button to the alert.

8. ****Cards****:

- `.card``: Creates a container for a card.
- `.card-header``, `.card-body``, `.card-footer``: Creates card sections.
- `.card-title``, `.card-text``: Adds a title or text to a card.
- `.card-img-top``, `.card-img-bottom``: Adds an image to the top or bottom of a card.

9. ****Modal****:

- `.modal``: Creates a modal dialog.
- `.modal-dialog``: Creates the modal content container.
- `.modal-content``: Creates the content area of the modal.
- `.modal-header``, `.modal-body``, `.modal-footer``: Creates sections within the modal.
- `.modal-title``: Adds a title to the modal.

10. ****Utilities****:

- `.d-{breakpoint}-{value}``: Controls the display property at different breakpoints. Values include ``none``, ``inline``, ``inline-block``, ``block``, ``table``, ``table-row``, ``table-cell``, ``flex``, and ``grid``.
- `.text-{color}``: Applies a text color. Colors include ``primary``, ``secondary``, ``success``, ``danger``, ``warning``, ``info``, ``light``, ``dark``, and ``body``.
- `.bg-{color}``: Applies a background color. Colors include ``primary``, ``secondary``, ``success``, ``danger``, ``warning``, ``info``, ``light``, ``dark``, and ``body``.
- `.rounded``, `.rounded-{value}``: Adds rounded corners to an element. Values include ``sm``, ``lg``, ``pill``, and ``circle``.
- `.shadow-{value}``: Adds a box shadow to an element. Values include ``sm`` and ``lg``.
- `.position-{value}``: Sets the position property. Values include ``static``, ``relative``, ``absolute``, ``fixed``, ``sticky``, and ``sticky-{value}``.
